

PRODUCT SELECTION + PROCUREMENT / SEPTEMBER 2026

FRP Window & Door Systems

System profiles for local fabrication.
Finished windows and doors for project supply.

Choose your supply route

System profiles - primary route

Select compatible sections, lengths and quantities.
Review drawings, interfaces and local fabrication before production.

Finished units - independent route

Submit a window schedule. Confirm dimensions, opening, glazing, hardware and delivery scope before manufacture.

Nine systems | Current profile-code index | Two RFQ templates

Catalog references support initial selection. Drawings, evidence and commercial scope are confirmed for each order.

01 / COMPARE SYSTEMS

Build a technical shortlist

Begin with the required opening and purchasing route. Frame depth alone does not determine thermal performance, structural capacity or project compliance.

System	Frame depth	Reference wall	Profile codes
50	50 mm	2.5 mm	GF0701 - GF0703
55	55 mm	2.7 mm	GF0801 - GF0804
60	60 mm	2.5 mm	CP6001 - CP6006
65	65 mm	3 mm	GF0201 - GF0206
70	70 mm	3 mm	GF0301 - GF0306
80	80 mm	3 mm	GF0501 - GF0503
90-casement	90 mm	3 mm	GF0601 - GF0603
90-sliding	90 mm	3 mm	CP001 - CP005
140	140 mm	3 mm	CP006 - CP011

How to read the data

July 2026 supplier catalog, PDF pages 9 and 11-15; current codes and 140 side-pressure naming follow the approved September 2026 product mapping. Dimensions, mass and leaf loads are catalog references, not verified ratings or guarantees. Confirm drawing revision, hardware, glazing, size, testing and supply scope for each order. U_f describes the frame; U_g the glass; U_w the complete window. No universal thermal or certification claim is made.

U_f = frame thermal transmittance. U_g = glass thermal transmittance. U_w = complete-window thermal transmittance. Compare only identified configurations under the same method.

Reference leaf loads shown on the following pages are catalog entries, not approved ratings. Hardware, leaf size, glass weight, reinforcement and testing must be reviewed together.

50 Series Window System

50 mm frame-depth reference system for local fabrication or separately specified finished-unit supply. Confirm opening, glazing and hardware together.

Source-catalog corner illustration. Assembly concept only; not a dimensioned drawing.

Frame depth reference	Wall reference	Leaf-load reference
50 mm	2.5 mm	65 kg - configuration review

Opening options

Inward-opening; Outward-opening; Tilt-and-turn; Top-hung outward; Tilt-in. Final compatibility requires the approved assembly.

Current profile index

Current code	Component / drawing status	Ref. kg/m
GF0701	Window frame	1.038
GF0702	Mullion	1.214
GF0703	Window sash	1.141

Quote by series + current code + drawing revision. Catalog mass, dimensions and leaf load are conditional references; production availability, tolerances and tested configurations require confirmation. Source: July 2026 catalog, profile index PDF 9 and system PDF 11.

55 Series Window & Door System

55 mm frame-depth reference system for local fabrication or separately specified finished-unit supply. Confirm opening, glazing and hardware together.

Source-catalog corner illustration. Assembly concept only; not a dimensioned drawing.

Frame depth reference	Wall reference	Leaf-load reference
55 mm	2.7 mm	70 kg - configuration review

Opening options

Inward-opening; Outward-opening; Tilt-and-turn; Top-hung outward; Tilt-in; Double-leaf; Inward-opening door; Outward-opening door. Final compatibility requires the approved assembly.

Current profile index

Current code	Component / drawing status	Ref. kg/m
GF0801	Window frame	1.147
GF0802	Mullion	1.323
GF0803	Window sash	1.438
GF0804	Adapter frame	1.051

Quote by series + current code + drawing revision. Catalog mass, dimensions and leaf load are conditional references; production availability, tolerances and tested configurations require confirmation. Source: July 2026 catalog, profile index PDF 9 and system PDF 11.

60 Series Window System

60 mm frame-depth reference system for local fabrication or separately specified finished-unit supply. Confirm opening, glazing and hardware together.

Source-catalog corner illustration. Assembly concept only; not a dimensioned drawing.

Frame depth reference	Wall reference	Leaf-load reference
60 mm	2.5 mm	75 kg - configuration review

Opening options

Inward-opening; Outward-opening; Tilt-and-turn; Top-hung outward; Tilt-in. Final compatibility requires the approved assembly.

Current profile index

Current code	Component / drawing status	Ref. kg/m
CP6001	Window frame	1.395
CP6002	Outward-opening window sash	1.457
CP6003	Mullion	1.702
CP6004	Adapter frame	1.262
CP6005	Outward-opening door leaf	1.997
CP6006	Door false mullion	1.432

Quote by series + current code + drawing revision. Catalog mass, dimensions and leaf load are conditional references; production availability, tolerances and tested configurations require confirmation. Source: July 2026 catalog, profile index PDF 9 and system PDF 12.

65 Series Window System

65 mm frame-depth reference system for local fabrication or separately specified finished-unit supply. Confirm opening, glazing and hardware together.

Source-catalog corner illustration. Assembly concept only; not a dimensioned drawing.

Frame depth reference	Wall reference	Leaf-load reference
65 mm	3 mm	110 kg - configuration review

Opening options

Inward-opening; Outward-opening; Tilt-and-turn; Top-hung outward; Tilt-in. Final compatibility requires the approved assembly.

Current profile index

Current code	Component / drawing status	Ref. kg/m
GF0201	Window frame	1.637
GF0202	Mullion	1.922
GF0203	Inward-opening window sash	1.395
GF0204	Outward-opening adapter frame	1.395
GF0205	Outward-opening window sash	1.395
GF0206	Outward-opening window frame	1.532

Quote by series + current code + drawing revision. Catalog mass, dimensions and leaf load are conditional references; production availability, tolerances and tested configurations require confirmation. Source: July 2026 catalog, profile index PDF 9 and system PDF 12.

02 / SYSTEM REFERENCE / 70

70 Series Window & Door System

70 mm frame-depth reference system for local fabrication or separately specified finished-unit supply. Confirm opening, glazing and hardware together.

Source-catalog corner illustration. Assembly concept only; not a dimensioned drawing.

Frame depth reference	Wall reference	Leaf-load reference
70 mm	3 mm	120 kg - configuration review

Opening options

Inward-opening; Outward-opening; Tilt-and-turn; Top-hung outward; Tilt-in; Double-leaf; Inward-opening door; Outward-opening door. Final compatibility requires the approved assembly.

Current profile index

Current code	Component / drawing status	Ref. kg/m
GF0301	Window frame	1.797
GF0302	Mullion	1.981
GF0303	Inward-opening window sash	2.288
GF0304	Outward-opening adapter frame	1.53
GF0305	Outward-opening window sash	2.404
GF0306	Outward-opening window frame	1.701

Quote by series + current code + drawing revision. Catalog mass, dimensions and leaf load are conditional references; production availability, tolerances and tested configurations require confirmation. Source: July 2026 catalog, profile index PDF 9 and system PDF 13.

80 Series Window System

80 mm frame-depth reference system for local fabrication or separately specified finished-unit supply. Confirm opening, glazing and hardware together.

Source-catalog corner illustration. Assembly concept only; not a dimensioned drawing.

Frame depth reference	Wall reference	Leaf-load reference
80 mm	3 mm	130 kg - configuration review

Opening options

Inward-opening; Tilt-and-turn. Final compatibility requires the approved assembly.

Current profile index

Current code	Component / drawing status	Ref. kg/m
GF0501	Window frame	1.915
GF0502	Mullion	2.1
GF0503	Inward-opening window sash	2.343

Quote by series + current code + drawing revision. Catalog mass, dimensions and leaf load are conditional references; production availability, tolerances and tested configurations require confirmation. Source: July 2026 catalog, profile index PDF 9 and system PDF 13.

02 / SYSTEM REFERENCE / 90-CASEMENT

90 Series Casement / Tilt-and-Turn System

90 mm frame-depth reference system for local fabrication or separately specified finished-unit supply. Confirm opening, glazing and hardware together.

Source-catalog corner illustration. Assembly concept only; not a dimensioned drawing.

Frame depth reference	Wall reference	Leaf-load reference
90 mm	3 mm	130 kg - configuration review

Opening options

Inward-opening; Tilt-and-turn; Double-leaf; Inward-opening door; Outward-opening door. Final compatibility requires the approved assembly.

Current profile index

Current code	Component / drawing status	Ref. kg/m
GF0601	Window frame	2.083
GF0602	Mullion	2.418
GF0603	Inward-opening window sash	2.451

Quote by series + current code + drawing revision. Catalog mass, dimensions and leaf load are conditional references; production availability, tolerances and tested configurations require confirmation. Source: July 2026 catalog, profile index PDF 9 and system PDF 14.

02 / SYSTEM REFERENCE / 90-SLIDING

90 Series Sliding Window System

Sliding window system with five current profile codes. Section drawings and component names must be confirmed during technical review.

Source-catalog corner illustration. Assembly concept only; not a dimensioned drawing.

Frame depth reference	Wall reference	Leaf-load reference
90 mm	3 mm	120 kg - configuration review

Opening options

Sliding. Final compatibility requires the approved assembly.

Current profile index

Current code	Component / drawing status	Ref. kg/m
CP001	Section details on request	Confirm
CP002	Section details on request	Confirm
CP003	Section details on request	Confirm
CP004	Section details on request	Confirm
CP005	Section details on request	Confirm

CP001-CP005 are current code positions. Component names and section drawings remain to be confirmed; the old three-section index is not a substitute.

Quote by series + current code + drawing revision. Catalog mass, dimensions and leaf load are conditional references; production availability, tolerances and tested configurations require confirmation. Source: July 2026 catalog, profile index PDF 9 and system PDF 14.

140 Series Compression-Seal Sliding Door

Side-pressure compression-seal sliding system. Confirm current assembly drawings and hardware; historical inward-opening component labels remain traceable.

Source-catalog corner illustration. Assembly concept only; not a dimensioned drawing.

Frame depth reference	Wall reference	Leaf-load reference
140 mm	3 mm	200 kg - configuration review

Opening options

Sliding with side-pressure compression seal. Final compatibility requires the approved assembly.

Current profile index

Current code	Component / drawing status	Ref. kg/m
CP006	Outer frame	2.82
CP007	Former inward-opening mullion - assembly to confirm	3.162
CP008	Sliding mullion	1.448
CP009	Sliding inner sash	2.036
CP010	Former inward-opening inner sash - assembly to confirm	1.945
CP011	Outer-frame closure	1.145

Legacy mapping: CP006/GF0801; CP007/GF0802; CP008/GF0803; CP009/GF0804; CP010/GF0805; CP011/GF0806. Legacy codes apply only to the old 140 drawings; current GF08 codes belong to the 55 system. Former inward-opening component names require assembly confirmation.

Quote by series + current code + drawing revision. Catalog mass, dimensions and leaf load are conditional references; production availability, tolerances and tested configurations require confirmation. Source: July 2026 catalog, profile index PDF 9 and system PDF 15.

03 / ACCESSORIES + CUSTOM DEVELOPMENT

Define the complete interface

Subframes / installation profiles

Source-catalog subframe illustrations; size designations require approved dimensional drawings.

Subframe designation	Confirm before ordering
65 x 24 Subframe	Wall thickness, tolerances, fastening, drainage and frame/wall interfaces
75 x 25 Subframe	Wall thickness, tolerances, fastening, drainage and frame/wall interfaces
75 x 50 Subframe	Wall thickness, tolerances, fastening, drainage and frame/wall interfaces
90 x 25 Subframe	Wall thickness, tolerances, fastening, drainage and frame/wall interfaces
90 x 50 Subframe	Wall thickness, tolerances, fastening, drainage and frame/wall interfaces

Confirm each supply item

Main frame and sash profiles form the window system. Subframes connect the unit to the opening. Beads, seals, corner connectors, hardware, glass and fabrication services must each appear in the agreed supply list. Cross-series interchangeability is not assumed.

Custom window-system development

Provide section drawings or interface requirements, target performance, material and finish preferences, fabrication method, development stage and annual demand. Review feasibility, tooling, samples and validation scope before committing production quantities.

Source: July 2026 catalog PDF 19. Illustration dimensions are not machining or installation instructions.

04 / BUY SYSTEM PROFILES

From section selection to repeat supply

For fabricators, OEMs and profile distributors. Start with the series or a drawing; early technical enquiries do not require a complete BOM.

Stage	Buyer prepares	Review / deliverable
1. Application	Opening, destination, target duty	Candidate system and missing information
2. Drawing review	Codes, revision, interfaces, tolerances	Compatible-section list and technical clarifications
3. Scope and quotation	Lengths, quantities, finish, accessories	Itemized scope, samples, tooling and freight
4. Samples	Short section / corner / sample window	Appearance, interfaces or assembly checks
5. Fabrication validation	Machining, joining, glass and hardware	Agreed trial and performance-validation plan
6. Pilot order	Approved revision, packing, acceptance	First-batch inspection and release criteria
7. Repeat supply	Forecast, batch feedback, change requests	Controlled revisions and reorder scope

Samples answer different questions

Short sections show material, finish and section shape. Corner samples demonstrate joint and interface concepts. Sample windows support assembly and specified testing. Pilot batches assess the agreed production and supply process. A section sample does not establish whole-window performance.

RFQ checklist

Series and current code; drawing revision; cut length and unit; quantity per section; finish; accessory scope; sample stage; destination; target date. Add critical tolerances and local fabrication capability where known.

Download: [f1-window-profile-bom-template.csv](#)

05 / BUY FINISHED UNITS

From window schedule to site delivery

For project purchasers, importers and finished-unit distributors. Quote each window or door mark against a defined configuration.

Stage	Buyer prepares	Review / deliverable
1. Project review	Destination, use, project requirements	Configuration options and evidence gaps
2. Window schedule	Mark, width, height, units, quantity	Opening-size vs finished-frame-size clarification
3. Configuration	Opening, glass, hardware, colors	Specified configuration and evidence scope
4. Quotation	Delivery point, date, batches	Price per mark plus explicit inclusions
5. Approval	Checked dimensions and shop drawings	Frozen schedule and production revision
6. Inspection	Acceptance and sampling requirements	Agreed inspection and identification records
7. Packing / delivery	Receiver, unloading and site limits	Crate/mark mapping and shipping documents
8. Installation / support	Local installer, wall interface, receipt check	Agreed installation information and spare parts

Separate the delivery milestones

Factory release, arrival at port, site delivery, unloading and installation completion are different events. Confirm freight, unloading, site installation, local testing and after-sales responsibilities in the order.

Download: [f1-window-schedule-template.csv](#)

A budget enquiry may start with approximate quantities. A production quotation requires checked dimensions, opening direction, configuration and supply scope.

06 / EVIDENCE + RFQ

Send the information you have

Choose profiles or finished units, identify the series if known, and tell us whether you need technical selection, samples, a budget or a formal quotation.

Match evidence to the purchase

Evidence level	What to identify
Profile / material	Section and revision, resin, dimensions, tolerances, finish and applicable material evidence
Complete window / door	Series, specimen size, opening, glazing, seals, hardware and test/calculation method
Project / installation	Destination requirements, mounting detail, installation responsibilities and acceptance criteria

A report for one specimen does not certify all sizes or series. Historical lift-sliding reports retain their original product identity and are not automatically evidence for the current 140 compression-seal configuration.

Include these files where available

Profiles: PDF/DWG/DXF drawings and a CSV/XLSX BOM.

Finished units: CSV/XLSX window schedule, PDF drawings and relevant site details.

Both: destination, quantity, expected date, sample needs and target performance.

Confirm before production

Drawing and schedule revision; current codes; dimensions and units; accessory and glass scope; finish; acceptance plan; packing; delivery terms; local installation; spare parts and after-sales responsibilities.

Source and edition

Product references and original corner illustrations: July 2026 source catalog, PDF pages 9, 11-15 and 19. Code mapping and current 140 name: approved September 2026 product review. This English F1 edition presents purchasing information, not a replacement for approved engineering drawings.
